

- 1. Substantially purified DNA comprising DNA encoding an amino acid sequence selected from the group consisting of the amino acid sequence of: (i) Streptococcus pyogenes DNase B enzyme as shown in Figure 4; and (ii) a sequence encoding a functional equivalent of S. pyogenes DNase B enzyme, the DNA being substantially free of DNA that does not encode the amino acid sequence of Figure 4 or a functional equivalent of S. pyogenes DNase B enzyme except for a leader peptide fused to the amino terminus of S. pyogenes DNase B enzyme.
- 2. The DNA of claim 1 wherein the DNA further comprises a DNA sequence encoding a leader peptide fused to the amino terminus of S. pyogenes DNase B enzyme.
- 3. The DNA of claim 1 having the nucleotide sequence of Figure 3.
- 4. An expression vector for <u>Streptococcus pyogenes</u>
 DNase B enzyme comprising the DNA sequence of claim 1
 operatively linked to at least one control sequence compatible with a suitable bacterial host cell.
- 5. An expression vector for <u>Streptococcus pyogenes</u>
 DNase B enzyme comprising the DNA sequence of claim 3
 operatively linked to at least one control sequence compatible with a suitable bacterial host cell.
- 6. The vector of claim 4 wherein the DNA encoding the <u>Streptococcus pyogenes</u> DNase B enzyme is linked to at least one sequence from bacteriophage λ .

25

5

10

15

20

- 7. The vector of claim 5 wherein the DNA encoding the Streptococcus pyogenes DNase B enzyme is linked to at least one sequence from bacteriophage λ .
- 8. A bacterial host cell transformed with the expression vector of claim 4 in a manner allowing the transformed bacterial host cell to express the <u>Streptococcus</u> <u>pyogenes</u> DNase B encoded by the DNA incorporated within the expression vector of claim 4 in a detectable quantity.

9. A bacterial host cell transformed with the expression vector of claim 5 in a manner allowing the transformed bacterial host cell to express the <u>Streptococcus</u> pyogenes DNase B encoded by the DNA incorporated within the expression vector of claim 5 in a detectable quantity.

- 10. Substantially purified <u>S. pyogenes</u> DNAse B enzyme comprising a protein thating the amino acid sequence of Figure 4.
- 11. A process for producing substantially purified Streptococcus pyogenes DNase B enzyme comprising:
 - (a) culturing the bacterial host cell of claim 8;
- (b) using the cultured bacterial host cell to express the DNase B enzyme; and
- (c) purifying the enzyme from the cultured bacterial host cell.
- 12. A process for producing substantially purified

 30 <u>Streptococcus pyogenes</u> DNase B enzyme comprising:
 - (a) culturing the bacterial host cell of claim 9;
 - (b) using the cultured bacterial host cell to express the DNase B enzyme; and
- (c) purifying the enzyme from the cultured bacterial 35 host cell.

90

5

10

15

20

- 13. <u>Streptococcus pyogenes</u> DNase B enzyme prepared by the process of claim 11.
- 14. <u>Streptococcus pyogenes</u> DNase B enzyme prepared by the process of claim 12.
 - 15. <u>Streptococcus pyogenes</u> DNase B enzyme fused at its amino terminus with a leader peptide, the leader peptide having the sequence M-N-L-L-G-S-R-R-V-F-S-K-K-C-R-L-V-K-F-S-M-V-A-L-V-S-A-T-M-A-V-T-T-V-T-L-E-N-T-A-L-A-R (SEQ ID NO: 1).
 - 16. A mutant of the protein whose amino acid sequence is shown in Figure 4 which at least one of the following mutations occurs:
 - (a) a deletion of one or more amino acids from the sequence of Figure 4;
 - (b) an insertion of one or more naturally-occurring L-amino acids into the sequence of Figure 4; and
- (c) replacement of at least one of the amino acids
 of Figure 4 with an alternative naturally occurring L-amino acid;
 the resulting mutant having reduced or increased DNase B
- 25 17. The mutant protein of claim 16 wherein the mutant substantially maintains the antigenic reactivity of natural <u>S. pyogenes</u> DNase B enzyme.

activity or another altered property.

- 18. A transcriptional fusion comprising at least a portion of the <u>S. pyogenes</u> DNase B DNA sequence of claim 3 fused with another gene, with the fusion having a detectable property altered from the property of the sequence of claim 3.
- 19. A translational fusion comprising at least a portion of the protein coded for by the <u>S. pyogenes</u> DNase B protein sequence of claim 3 fused with another protein, with

5

10

the fusion having a detectable property altered from the property of the protein coded for by the sequence of claim 3.

- DNase B enzyme substantially free of proteins other than: (1) the <u>Streptococcus</u> DNase B enzyme and (2) <u>Streptococcus</u> DNase B enzyme fused at its amino terminus with a leader peptide, the substantially purified protein being substantially free of mitogenic activity.
 - 21. The substantially purified <u>S. pyogenes</u> DNase B enzyme of claim 20 comprising Fraction I of <u>S. pyogenes</u> DNase B enzyme and substantially free of Fraction II of <u>S. pyogenes</u> DNase B enzyme.
 - 22. The substantially parified <u>S. pyogenes</u> DNase B enzyme of claim 20 comprising Fraction II of <u>S. pyogenes</u> DNase B enzyme and substantially free of Fraction I of <u>S. pyogenes</u> DNase B enzyme.
 - 23. A process for preparing substantially purified Streptococcus pyogenes DNase B enzyme comprising:
 - (a) absorption to and elution from diethylaminoethyl cellulose to produce a first eluate;
 - (b) chromatography of the first\eluate on phenyl agarose to produce a second eluate;
 - (c) chromatography of the second eluate on heparin agarose to produce a third eluate; and
 - (d) chromatofocusing of the third eluate to produce substantially purified DNase B enzyme.
 - 24. The process of claim 23 further comprising purification of the substantially purified DNase B by reversephase high-pressure liquid chromatography.

15

20

25

30

- 25. Substantially purified <u>Streptococcus pyogenes</u>
 DNase B enzyme produced by the process of claim 23.
- 26. A single-stranded nucleic acid probe hybridizing with the DNA sequence coding for the aminoterminal 23 amino acids of the <u>Streptococcus pyogenes</u> DNAse B enzyme, not including any portion of the leader sequence thereof, with no greater than about a 30% mismatch.
- 27. An antibody specifically binding the Streptococcus pyogenes DNase B enzyme of claim 13.
 - 28. An antibody specifically binding the Streptococcus pyogenes DNase B enzyme of claim 14.
 - 29. An antibody specifically binding the Streptococcus pyogenes DNase B enzyme of claim 20.
 - 30. An antibody specifically binding the Streptococcus pyogenes DNase Stre
 - 31. A monoclonal antibody specifically binding the Streptococcus pyogenes DNase B enzyme of claim 13.
- 32. A monoclonal antibody specifically binding the Streptococcus pyogenes DNase B enzyme of claim 14.
 - 33. A monoclonal antibody specifically binding the Streptococcus pyogenes DNase B enzyme of claim 20.
 - 34. A monoclonal antibody specifically binding the Streptococcus pyogenes DNase B enzyme of claim 25.
- 35. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:

5

15

20

(a) providing a test sample suspected of containing anti-Streptococcus pyogenes DNase B antibody;

(h) adding a quantity of the <u>Streptococcus pyogenes</u>
DNase B enzyme of claim 13 to the test sample, the quantity
being sufficient to produce a detectable level of enzymatic
activity in the absence of inhibition of the enzymatic
activity by anti-DNase B antibody in the test sample; and

- (c) determining a level of activity of DNase B enzyme in the test sample by performing an enzyme assay to detect and/or determine the anti-Streptococcus pyogenes antibody in the test sample.
- 36. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) providing a test sample suspected of containing anti-Streptococcus pyogenes DNase B antibody;
- (b) adding a quantity of the <u>Streptococcus pyogenes</u>
 DNase B enzyme of claim 14 to the test sample, the quantity
 being sufficient to produce a detectable level of enzymatic
 activity in the absence of inhibition of the enzymatic
 activity by anti-DNase B antibody in the test sample; and
- (c) determining the level of antibody of DNase B enzyme in the test sample to detect and/or determine the anti-Streptococcus pyogenes antibody in the test sample.
- 37. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) providing a test sample suspected of containing anti-Streptococcus pyogenes DNase B antibody;
- (b) adding a quantity of the <u>Streptococcus pyogenes</u>
 DNase B enzyme of claim 20 to the test sample, the quantity
 being sufficient to produce a detectable level of enzymatic
 activity in the absence of inhibition of the enzymatic
 activity by anti-DNase B antibody in the test sample, and

5

10

15

20

25

30

(c) determining the level of activity of DNase B enzyme in the test sample by performing an enzyme assay to detect and/or determine anti-Streptococcus pyogenes antibody in the test sample

5

10

- 38. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) providing a test sample suspected of containing anti-Streptococcus pyogenes DNase B antibody;
- (b) adding a quantity of the <u>Streptococcus pyogenes</u>
 DNase B enzyme of claim 25 to the test sample, the quantity
 being sufficient to produce a detectable level of enzymatic
 activity in the absence of inhibition of the enzymatic
 activity by anti-DNase B antipody in the test sample; and
- (c) determining the devel of activity of DNase B enzyme in the test sample by performing an enzyme assay to detect and/or determine anti-Streptococcus pyogenes antibody in the test sample.

20

25

30

- 39. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) binding the <u>Streptococcus</u> pyogenes DNase B enzyme of claim 13 to a solid support;
- (b) reacting a test sample suspected of containing anti-Streptococcus pyogenes DNase B antibody with the Streptococcus pyogenes DNase B enzyme bound to the solid support to bind the antibody to the enzyme and thus to the solid support; and
- (c) detecting the antibody bound to the solid support to detect and/or determine the antibody in the test sample.

- 40. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) binding the <u>Streptococcus pyogenes</u> DNase B enzyme of claim 14 to a solid support;
- (b) reacting a test sample suspected of containing anti-Streptococcus progenes DNase B antibody with the Streptococcus progenes DNase B enzyme bound to the solid support to bind the antibody to the enzyme and thus to the solid support; and
- (c) detecting the antibody bound to the solid support to detect and/or determine the antibody in the test sample.
- 41. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) binding the <u>Straptococcus pyogenes</u> DNase B enzyme of claim 20 to a solid support;
- (b) reacting a test sample suspected of containing anti-Streptococcus pyogenes DNase B antibody with the Streptococcus pyogenes DNase B enzyme bound to the solid support to bind the antibody to the enzyme and thus to the solid support; and
- (c) detecting the antibody bound to the solid support to detect and/or determine the antibody in the test sample.
- 42. A method for detecting and/or determining anti-30 <u>Streptococcus pyogenes</u> DNase B antibody in a test sample, comprising the steps of:
 - (a) binding the <u>Streptococcus pyogenes</u> DNase B enzyme of claim 25 to a solid support;
 - (b) reacting a test sample suspected of containing anti-Streptococcus pyogenes DNase B antibody with the Streptococcus pyogenes DNase B enzyme bound to the solid

10

15

20

25

support to bind the antibody to the enzyme and thus to the solid support; and

- (c) detecting the antibody bound to the solid support to detect and/or determine the antibody in the test sample.
- 43. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) preparing a buffered solution of the DNase B of claim 13;
- (b) reacting the buffered DNase B solution with a test sample suspected of containing anti-S. pyogenes DNase B antibody; and
- (c) detecting a reaction between the DNase B and the anti-DNase B antibody by observing and/or measuring a change in light absorption and/or light scattering in the solution.
- 44. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
 - (a) preparing a buffered solution of the DNase B of claim 14;
 - (b) reacting the buffered DNase B solution with a test sample suspected of containing anti-S. pyogenes DNase B antibody; and
 - (c) detecting a reaction between the DNase B and the anti-DNase B antibody by observing and/or measuring a change in light absorption and/or light scattering in the solution.
 - 45. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) preparing a buffered solution of the DNase B of claim 20;

97

5

10

15

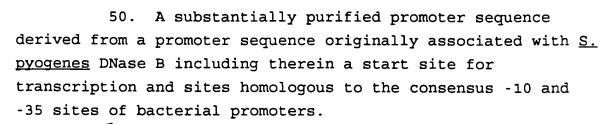

20

25

- (b) reacting the buffered DNase B solution with a test sample suspected of containing anti-S. pyogenes DNase B antibody; and
- (c) detecting a reaction between the DNase B and the anti-DNase B antibody by observing and/or measuring a change in light absorption and/or light scattering in the solution.
- 46. A method for detecting and/or determining anti-Streptococcus pyogenes DNase B antibody in a test sample, comprising the steps of:
- (a) preparing a buffered solution of the DNase B of claim 25:
- (b) reacting the buffered DNase B solution with a test sample suspected of containing anti-S. pyogenes DNase B antibody; and
- (c) detecting a reaction between the DNase B and the anti-DNase B antibody by observing and/or measuring a change in light absorption and/or light scattering in the solution.
- 47. A method of using a promoter originally associated with the <u>S. pyogenes</u> DNase B gene to express a protein other than DNase B comprising:
 - (a) separating the promoter originally associated with the <u>S. pyogenes</u> DNase B gene from the <u>S. pyogenes</u> DNase B gene;
 - (b) operatively linking the promoter with a structural gene for a <u>S. pyogenes</u> protein other than the gene for DNase B; and
- (c) expressing the protein encoded by the 30 structural gene.
 - 48. The method of claim 47 wherein the protein is expressed in <u>S. pyogenes</u>.
- 35 49. The method of claim 48 wherein the protein is expressed in a prokaryote other than S. pyogenes.

10

15

51. A process for using a leader peptide associated with <u>S. pyogenes</u> DNase B enzyme to express a protein in a prokaryote comprises:

- (1) fusing the DNA coding for the protein to DNA coding for a leader peptide, the leader peptide having the sequence M-N-L-L-G-S R-R-V-F-S-K-K-C-R-L-V-K-F-S-M-V-A-L-V-S-A-T-M-A-V-T-T-V-T-L-E-W-T-A-L-A-R (SEQ ID NO: 1), so that the fused DNA codes for a recombinant protein with a single reading frame with the leader peptide being at the aminoterminus of the protein;
- (2) introducing the fused DNA into the prokaryote; and
- (3) expressing the fused DNA in the prokaryote so that the recombinant protein a produced in a recoverable quantity.
- 52. The process of claim 51 wherein the prokaryote is $\underline{E.\ coli}$.
- 53. The process of claim 51 wherein the prokaryote is a gram-positive bacterium selected from <u>Staphylococcus</u>, <u>Streptococcus</u>, and <u>Streptomyces</u> species.
- 54. The process of claim 51 wherein the recombinant protein is excreted into the culture medium of the prokaryote.
 - 55. A method for immunizing a mammal against infection with <u>S. pyogenes</u> comprising administering a quantity of the purified <u>S. pyogenes</u> DNase B enzyme of claim 13 to the

99

5

10

15

20

25

mammal sufficient to stimulate production of antibodies specific for <u>§. pyogenes</u> DNase B.

- 56. A method for immunizing a mammal against infection with <u>S. pyogenes</u> comprising administering a quantity of the purified <u>S. pyogenes</u> DNase B enzyme of claim 14 to the mammal sufficient to stimulate production of antibodies specific for <u>S. pyogenes</u> DNase B.
- 10 57. A method for immunizing a mammal against infection with <u>S. pyogenes</u> comprising administering a quantity of the purified <u>S. pyogenes</u> mutant DNase B enzyme of claim 17 to the mammal sufficient to stimulate production of antibodies specific for <u>S. pyogenes</u> DNase B.
 - 58. A method for immunizing a mammal against infection with <u>S. pyogenes</u> comprising administering a quantity of the purified <u>S. pyogenes</u> DNase B enzyme of claim 20 to the mammal sufficient to stimulate production of antibodies specific for <u>S. pyogenes</u> DNase B.
 - 59. A method for immunizing a mammal against infection with <u>S. pyogenes</u> comprising administering a quantity of the purified <u>S. pyogenes</u> DNase B enzyme of claim 25 to the mammal sufficient to stimulate production of antibodies specific for <u>S. pyogenes</u> DNase B.
 - 60. A method for treating cystic fibrosis in a patient with cystic fibrosis comprising:
 - (a) generating an aerosol of the purified enzymatically active DNase B enzyme of claim 13; and
 - (b) administering the aerosol to a patient with cystic fibrosis in a quantity sufficient to reduce lung fluid viscosity in the patient.

35

30

5

15

20

- 61. A method for treating cystic fibrosis in a patient with cystic fibrosis comprising:
- (a) generating an aerosol of the purified enzymatically active DNase B enzyme of claim 14; and
- (b) administering the aerosol to a patient with cystic fibrosis in a quantity sufficient to reduce lung fluid viscosity in the patient.
- 62. A method for treating cystic fibrosis in a patient with cystic fibrosis comprising:
- (a) generating an aerosol of the purified enzymatically active DNase B enzyme of claim 20; and
- (b) administering the aerosol to a patient with cystic fibrosis in a quantity sufficient to reduce lung fluid viscosity in the patient.
- 63. A method for treating cystic fibrosis in a patient with cystic fibrosis comprising.
- (a) generating an aerosol of the purified enzymatically active DNase B enzyme of claim 25; and
- (b) administering the aerosol to a patient with cystic fibrosis in a quantity sufficient to reduce lung fluid viscosity in the patient.
